

Integrating Acupuncture, Biomechanical Patterns and Rehabilitation in the Treatment of Canine Shoulder Lameness

Canine Shoulder Lamenesses can be a prolonged and is often a difficult syndrome to resolve. A common pattern of medial shoulder instability often has a distinct biomechanical imbalance and on resolution of this pattern, treatment including a number of acupuncture techniques, herbal formulae and subsequent appropriate rehabilitation, the percentage of full resolution is high with minimal invasive intervention. This pattern and the options for acupuncture, herbs and rehabilitation techniques will be discussed.
